

BLACKROD PRIMARY SCHOOL

Spring Project Reflections

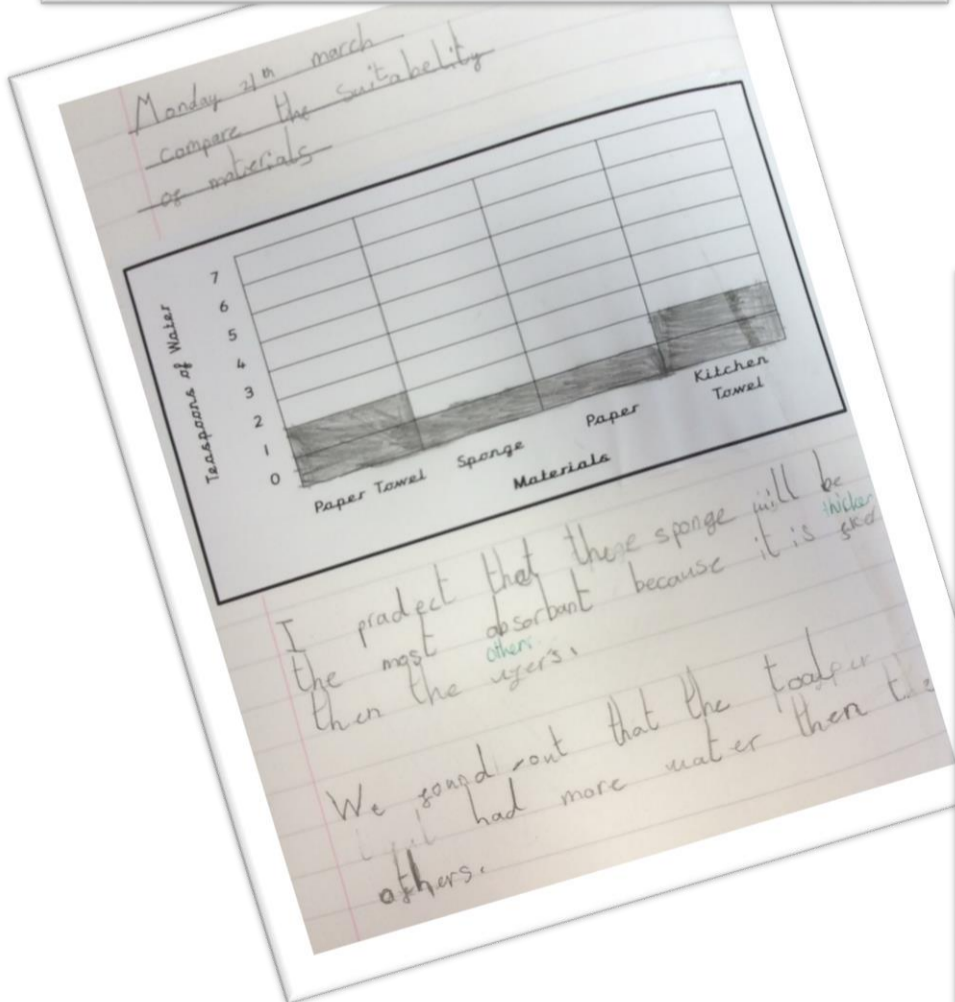

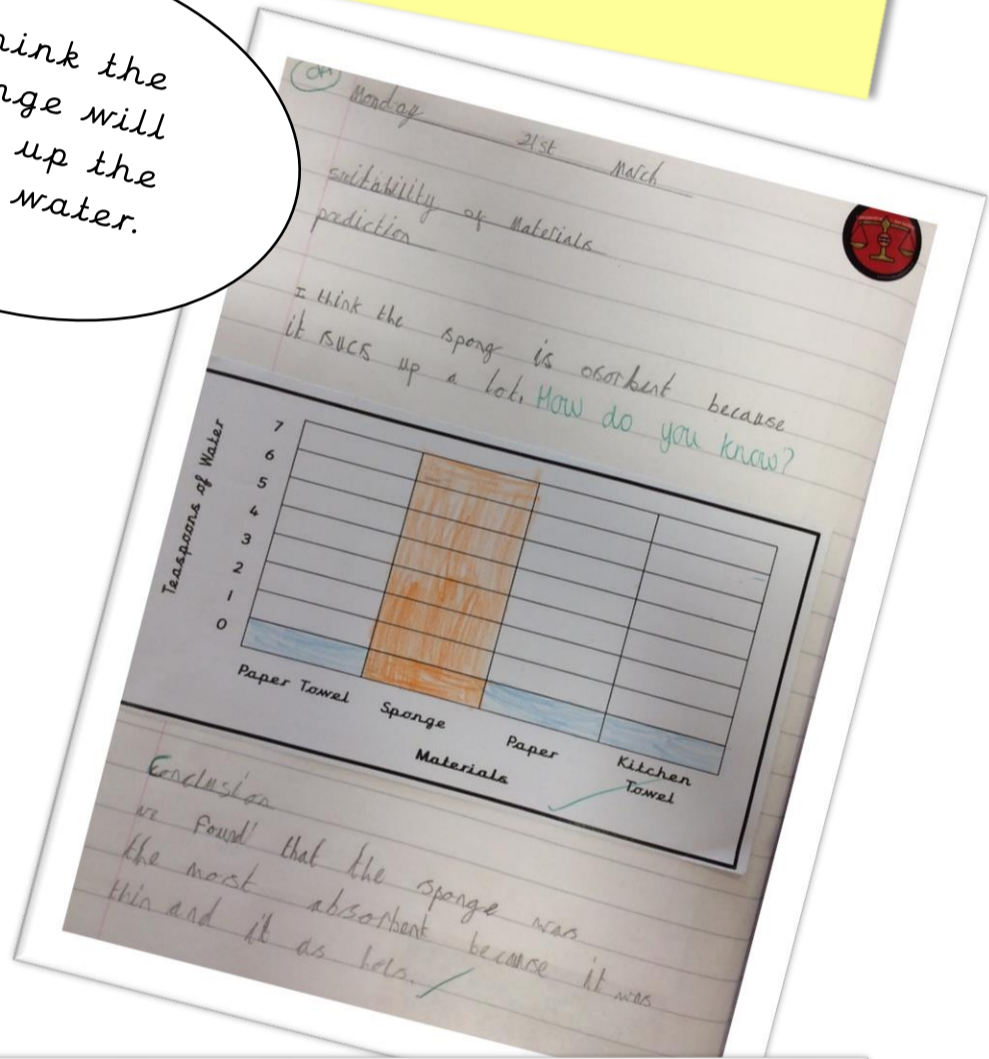

Science – Materials

We have been looking at the suitability of materials. We investigated which material would soak up a puddle of water. The children predicted which material they thought would soak up the puddle. Once we have completed the investigation the children concluded their findings.

I think the sponge will soak up the most water.

BLACKROD PRIMARY SCHOOL

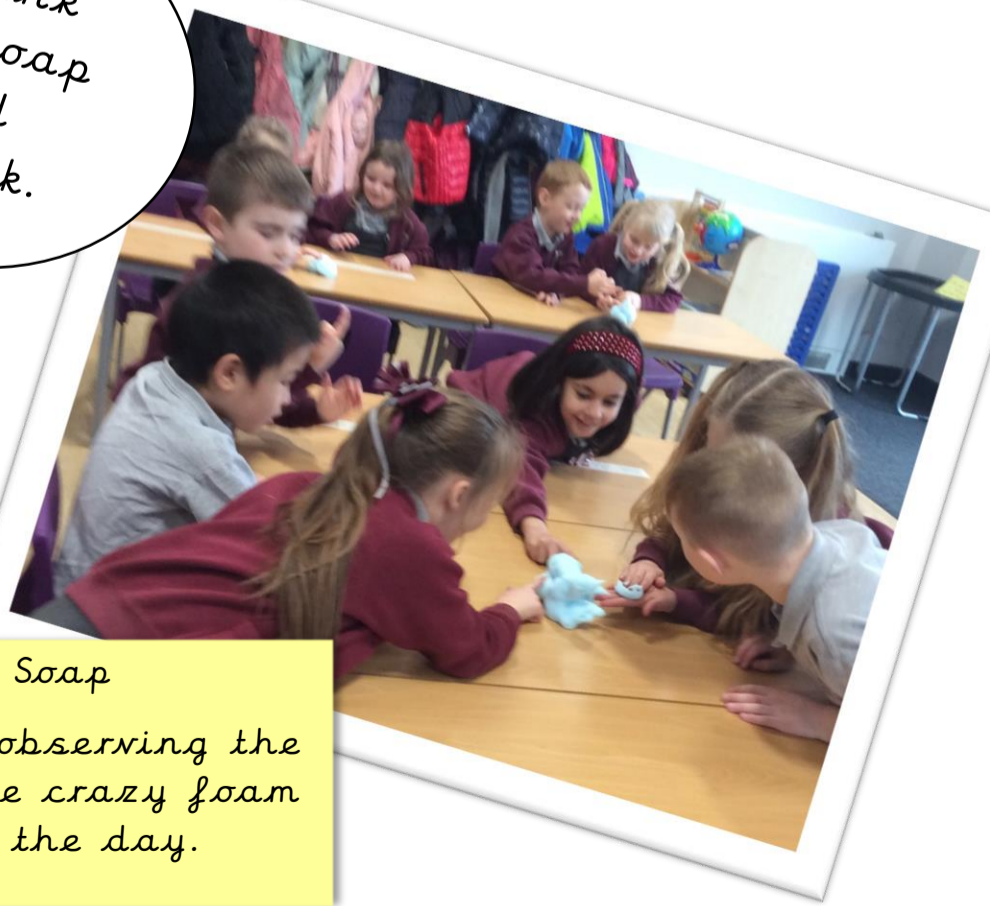

We have been looking at uses for stretchy materials. We have talked about what if some of our everyday items were stretchy, would they be fit for purpose. We then tested the stretchiness of different materials.

I think the slime will stretch the most.

I think the soap will shrink.

Crazy Soap
We have been observing the changes of the crazy foam soap over the day.

BLACKROD PRIMARY SCHOOL

We used different substances to try to free the animals from the ice. The children predicted which substance would melt the ice the quickest. We then observed over time to see which melted the quickest.

We found out that the salt melted the ice the quickest.
