## Project Reflection – Spring 1

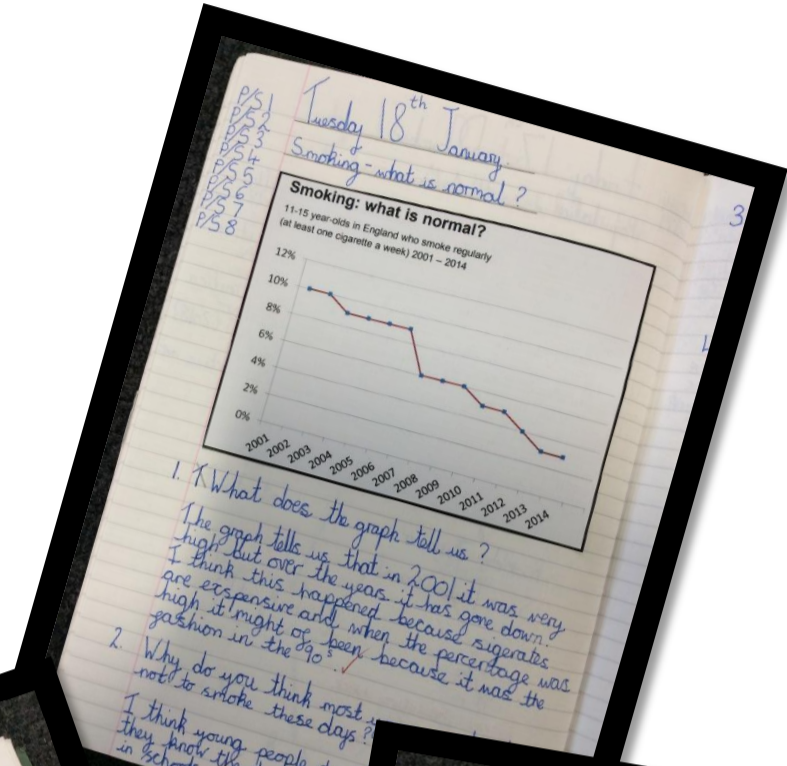

### PSHE- Would you risk it?

#### Keeping Healthy

In PSHE we looked at taking risks and bad habits and how smoking and alcohol can have effects on our Health.

We looked at a graph of smoking in young people and how the amount of young people smoking has decreased.

We wrote letters to an editor to explain these facts.

3. In schools - Why do you think some young people still choose to smoke?  
I think some young people still smoke because their parents might do it and are influenced by social media.

4. If the graph continues like this, do you think England will be smoke free?  
I think the smoking population could go down. However, smoking is an addiction so I think some people will still smoke.

**Shock of teenage smokers**

A shocking new report has shown that there are 100,000 young smokers in the UK. The report says that one in ten young people in the UK are regular smokers. The report also says that the number of young smokers has increased by 50% since 2001.

The report says that the number of young smokers has increased by 50% since 2001. This is a shocking increase and it shows that more young people are taking up smoking. The report also says that the number of young smokers has increased by 50% since 2001.

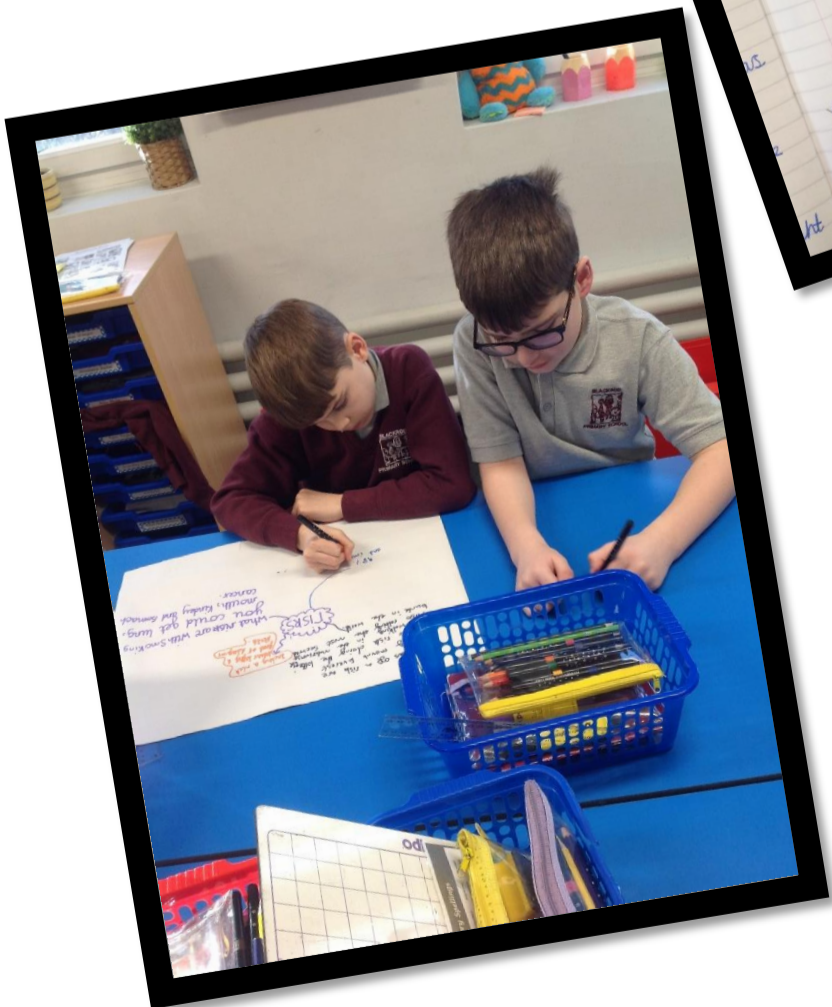

X. Why does the Dear Editor,  
I am writing to you after reading your new article "Shock of teenage smokers". You are

probably wondering why I am so upset about your article, so I will continue and explain why. You may find this surprising but healthy teenagers would rather help their bodies than run them. I personally think as playing video games, eat healthy and exercise. In my opinion, I found out that in 2001, the teenagers - 10% of teenagers smoked but now it is 3%. That means you should be celebrating this instead of thinking about the negatives. I hope you think about my advice and use it.

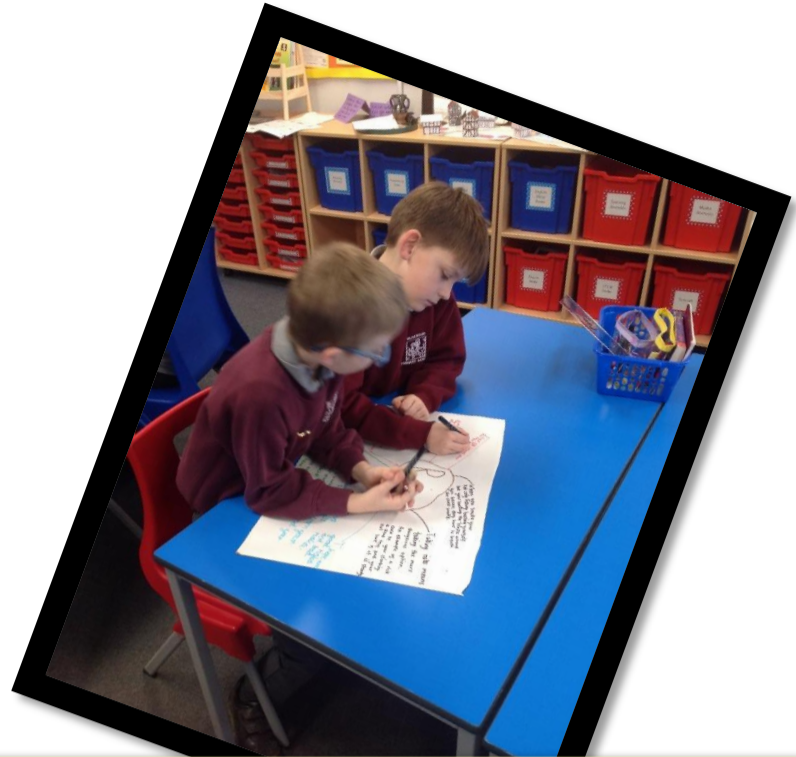

Yours faithfully,  
Phoebe O'Brien

## Alcohol and its effects

We considered some of the reasons why many people think that lots of young people drink alcohol despite the fact that these days most of them have never had a drink of alcohol.

We looked at a graph of data and shared our opinions on it. We then wrote a newspaper report about our findings.
